

Subsurface Utilities Engineering (SUE)- - -

The other side of FXSA, Inc.- - -

Most of our clients are familiar with FXSA, Inc. complete array of Civil Engineering Services, Surveying Services, and Planning. However, there is another side to our firm's capabilities and services. We are pre-certified with the Texas Department of Transportation (TxDOT) to perform SUE services as well. We have conducted SUE services for several projects

for the City of El Paso under a contract

funded by TxDOT. These projects in-

cluded SUE services for the Airway Blvd. project from Edgemere Blvd. to Airport Rd., which was very complex due to the amount of underground utilities and time constraints. Our firm has also successfully completed other SUE projects such as Lee Trevino from Interstate (I-10) to Rojas St. and a two 48" concrete box culvert under Mesa Street by Mesita Subdivision.

City of El Paso's Storm 2006 Projects Underway- - -

FXSA, Inc. Successfully Completes Two 2006 Storm Projects- - -

Back in December of 2006, the city of El Paso issued Notices to Proceed for two Storm 2006 projects to FXSA, Inc.: The Mesa Hills & Bluff Trail Interchange, and the North-South Freeway Channel. These two projects, although different in nature, have the same objective, which is to improve the City of El Paso's storm management system. FXSA, Inc. successfully completed both projects simultaneously under a very aggressive sched-

ule as requested by the City. Both projects are under the permitting process. "Hundreds of people on the Westside and

"Hundreds of people on the Westside and Northeast will be benefited by these two projects."

Victor H. Enciso, P.E.
Principal of FXSA, Inc.

Northeast will be benefited by these two projects," Victor H. Enciso, P.E., said. It is anticipated that the projects will go to construction sometime this year. The construction schedule will also be just as aggressive as the design schedule. FXSA, Inc. is expecting to have both projects built by the end of this year.

Words from our publisher---

Dear Readers:

Surveying technology has advanced by leaps and bounds in recent years. It hasn't been that long since surveyors were using transits with Vernier Scale Readers, then the electronic distance meters came in, then the total stations, then the robotic total stations, followed by GPS receivers, and just when surveyors thought they had it all figured out, the Virtual References Stations came into place. It has been a real challenge to keep up with technology. Fortunately, our firm has been able to stay up with this technology. Today FXSA, Inc. owns its VRS antenna and is networked throughout El Paso County. We also have access to other networks throughout the State of Texas and Oklahoma. These capabilities give our firm the advantage of serving our Clients more efficiently and cost effectively.
